September 23, 2016
For Immediate Release
Clark County Flooding Update #4
John M. Ross
Clark County Emergency Management Director

Damage assessment continues. At this time there are approximately 70 locations where there is either water over the roadway or some type of damage and/or closures. Crews are working to make repairs where possible. Some areas are still underwater so repairs and assessment are not yet possible.

In cooperation with the American Red Cross, clean up kits will be made available through the Clark County Health Department. These kits are intended for residents who have experienced flooding in their residences. Kits can be obtained by contacting the Clark County Health Department at 715-743-5112.

It is also important for residents who have private wells that may have been flooded to have them tested. Test kits can be obtained from the Clark County Health Department by calling 715-743-5112. Those interested in a test kit will need to pick it up at the Health Department.

Clark County residents who may have damages to their homes in Clark County are asked to report those damages to the American Red Cross Disaster Services at 877-618-6628 or to Clark County Emergency Management at 715-743-5100. If residents in Clark County are unable to leave their homes because of high water and need assistance they should report that to the Clark County Sheriff's Office at 715-743-3157.

The boat barriers by the dam on Lake Arbutus were damaged during the flooding and are not in place. This creates a dangerous situation for boaters. Being out on the water is not recommended.

Clark County forest roads, boat landings and trails remain closed until further notice.

Motorists are reminded not to drive through water over roadways or drive around barricades indicating road closures. This is dangerous and motorists should find an alternate route if they encounter this situation. Motorists should use caution when travelling as some roadway damage may not be immediately visible.
